

New iPhone® Apps From The National Swimming Pool Foundation® Make Pool Water Calculations Easier

The National Swimming Pool Foundation® (NSPF®), in partnership with inQ Mobile Apps LLC (inQ Mobile), has introduced three iPhone applications (Apps) to make pool water calculations easier and quicker for pool and spa industry professionals and consumers.

The App calculations match those used in the Pool & Spa Operator™ Handbook and the Pool Math™ Workbook, both published by NSPF. One App calculates Pool Volume for different shaped pools and spas (\$ 5.99). A second calculates Water Flow for determining flow rates, turnover rates, number of turnovers, and target turnover rates (\$ 4.99). And, a third App allows the calculation of the Saturation Index to help maintain proper water balance (\$ 3.99). The Apps can be used on iPhone®, iPod Touch® and iPad® products and are available from the Apple® App store, by clicking on the "Productivity" tab or by searching for "swimming pool."

"It is exciting to put calculations in the palm of industry professional's hands," says Alex Antoniou, Ph.D., Director of Educational Programs at NSPF. "Service and retail technicians and operators normally have their phone with them and now they can have their pool Apps at their fingertips," concludes Antoniou.

"The Apps will deliver accuracy and speed on the job. That's valuable!" adds Thomas M. Lachocki, Ph.D. and CEO of the NSPF. "We will continue to partner to better serve others with valuable tools," Dr. Lachocki reinforces. "inQ Mobile is one of those partners who projects value through technology."
